CAREER OBJECTIVE

Artificial Intelligence Engineering student with strong exposure to Machine Learning, Deep Learning, NLP, and backend application development. Experienced in building end-to-end ML pipelines, audio classification systems, NLP-based text classification models, and full stack applications using Flask and Vue.js. Passionate about AI systems, LLM workflows, and practical problem solving using modern AI technologies.

Currently exploring Retrieval-Augmented Generation (RAG), LangChains, Large Language Models (LLMs), and AI-powered application workflows through academic coursework and self-learning.

EDUCATION

Vignan's Institute of Information Technology	2023 –2027
B.Tech in Artificial Intelligence Engineering	CGPA: 9.1
Indian Institute of Technology Madras	
BS in Data Science and Applications (Online Degree Program)	2023–2027

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, C, SQL

Frameworks & Web Technologies: Flask, Vue.js, Jinja2, HTML, CSS, Bootstrap, REST APIs

Machine Learning & Deep Learning: Scikit-learn, TensorFlow, Keras, PyTorch, CNNs, RNNs, LSTMs, BiLSTM, NLP, LightGBM, Logistic Regression, SVM, Random Forest

LLM & AI Concepts: Retrieval-Augmented Generation (RAG) Fundamentals, Large Language Model (LLM) Concepts, Prompt Engineering Basics, AI Workflow Understanding, ChatGPT, Claude, OpenAI Platforms

Audio Processing & Visualization: Librosa, MFCC Feature Extraction, Mel-Spectrogram Processing, Matplotlib, Seaborn

Databases & Backend: PostgreSQL, SQLite, SQLAlchemy, Redis, JWT Authentication, Role-Based Access Control

Developer Tools: Git, GitHub, Docker, Google Colab, VS Code

Coursework: Data Structures & Algorithms, Operating Systems, DBMS, OOPs, Computer Networks

PROJECTS

Music Genre Classification using Deep Learning | [GitHub](#) | [Notebook](#)

Technologies: PyTorch, CNN, Librosa, TensorFlow

- Developed an audio classification pipeline using Mel-spectrogram and MFCC feature extraction techniques for music genre prediction.

- Implemented CNN-based deep learning architectures to capture temporal and frequency-based audio patterns from spectrogram inputs.
 - Applied preprocessing, augmentation, and regularization techniques to improve classification robustness on noisy datasets.
 - Worked with audio feature engineering and experimented with multiple deep learning approaches for improved prediction accuracy.
-

Placement Portal Application

Technologies: Flask, Vue.js, PostgreSQL, Redis, SQL Alchemy | [GitHub](#) | [Demo](#)

- Developed a full stack placement management platform supporting role-based access control for students and administrators.
 - Designed RESTful APIs with JWT-based authentication and authorization workflows using Flask.
 - Integrated PostgreSQL for persistent data management and Redis for caching and workflow optimization.
 - Implemented frontend-backend communication using Vue.js for dashboard rendering and application tracking workflows.
 - Worked on backend architecture, authentication systems, and database integration.
-

Comment Category Prediction System | [GitHub](#) | [Notebook](#)

Technologies: Scikit-learn, LightGBM, NLP

- Built a machine learning pipeline for automated text classification using TF-IDF vectorization and NLP preprocessing techniques.
 - Trained and evaluated Logistic Regression, SVM, and LightGBM models for comment categorization.
 - Performed feature engineering, preprocessing, and evaluation using precision, recall, accuracy, and F1-score metrics.
 - Improved model performance through experimentation with multiple ML approaches.
-

Phishing Detection Chrome Extension | [GitHub](#) | [Demo](#)

Technologies: Python, Random Forest, JavaScript

- Developed a Chrome extension for real-time phishing website detection using machine learning-based URL analysis.
- Trained a Random Forest classifier on URL security features to identify malicious and suspicious websites.
- Integrated the trained model into browser extension workflows for live website risk prediction.
- Built the project during a hackathon environment with focus on practical cybersecurity use cases.

EXPERIENCE

Deloitte Data Analytics Virtual Experience Program – Forage

Remote | 2025

- Completed a virtual data analytics simulation involving business dataset analysis and insight generation.
- Performed data interpretation and created visual summaries to support business decision-making scenarios.
- Worked on analytical thinking, business problem solving, and data-driven reporting approaches.

CERTIFICATIONS

- NPTEL Certification – Large Language Models (IIT Madras)
- Python Certification – Infosys Springboard
- JavaScript Essentials – Cisco
- HTML & CSS Certification – Cisco

ADDITIONAL INFORMATION

- Comfortable working with AI tools and modern AI-assisted development workflows.
- Strong interest in AI systems, NLP, LLM applications, and backend engineering.
- Based in Visakhapatnam and available for in-office internship opportunities.
